

The ETHERsystem

The ETHERsystem was envisioned as a network of support for the Father Ethereum Doge (\$ETHER). It will consist of two projects that will both offer life of the ETHER system.

The Second token is called EasyETH (\$EasyE) and it is designed to reward holders in native \$ETH-Bep20, 5% of each transaction will come back to holders as rewards in this fun favourite token!

Offering ETH rewards gives more options for people to choose on how they want to deal with their rewards without hurting the chart. Ethereum Doge has big Marketplace plans and long term vision to offer build as a service specialising in the NFT and Art side of the Crypto Space!

Altogether this will make up the ETHERsystem, a project that is backed by whales, created by a community and ready to blast us to the moon! Lets get into the reason why we are here in the first place a quick glance at the vision behind Ethereum Doge, followed by the breakdown of the two projects being born!

THE BEST WAY TO GET TWO REWARDS BOTH WITH AMAZING FUTURES!

The Vision Of Ethereum Doge

Ethereum Doge (\$ETHER) launched in late November of 2022 and has already established a strong community in the BSC crypto space. We aim to bring crypto to the Memecoin lovers of the world. Ethereum Doge is built on the Binance Smart Chain network benefiting from it's low gas fees.

Ethereum Doge has learned quite a few things from other Memecoins! With a strong community, anything is possible. By creating a place where everyone can feel safe and enjoy their

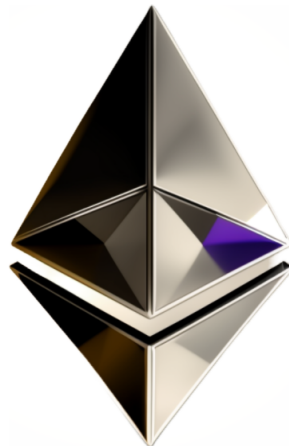

investment, there is no limit. With that in mind, there is no dev tax. No marketing wallet tax. Every transaction has a 9% tax. 5% goes to our locked liquidity pool to add stability which makes our Diamond Handed investors not have to worry about volatility. 4% goes to rewarding our holders with Binance Pegged \$ETH!

Our roadmap includes some huge plans and goals to accomplish!

EtherDEX will only allow trading with vetted projects! Ethereum Doge NFT's will appeal to a massive fan base of art-loving crypto enthusiasts. EtherDAO will create a massive ecosystem that is 100% community driven with no internal leadership. A truly decentralized organization that decides the overall direction of the Ethereum Doge Community!

Like every other successful Memecoin, the community is the most important aspect. We, the team, rely on you guys just as much as you rely on us. We will work together, community and team, to create the most successful Meme on the BSC. (INFO from Ethereum Doge Whitepaper)

EasyETH

\$EasyETHER

\$EasyETH was envisioned as a simple rewards token to reward loyal holders in \$ETH-Bep20 where a 5% tax from each transaction will be rewarded back to loyal holders. ETH gives holders more option when it comes to the rewards and also a reward that wont hurt the chart when people want to trade it!

\$EasyETH NFTs Will Be available at launch and available to mint on launch day! They will consist of a 300 NFT collection, and On Mint out a total of 50 BNB will be given away to lucky minters of the Legendary status NFTs!

More Utility will be announced closer to completion as we don't want to give away our plans for future utility as I think it will be the first of its kind!

Tokenomics

TOTAL SUPPLY - 10,000,000,000

TAX BREAKDOWN IS AS FOLLOWS

7% Buy Tax - 7% Sell Tax

5% - Rewards in \$ETH

2% - LP

ETHER Ninja Doge NFTs

The ETHERsystem NFTs is a 300 Art collection of AI generated Ninja Doges

There will be 125 Various Ninja Doge's, Fighters of the ETHERsystem, \$EasyETHER mascots and they are all very easy on the eyes and everyone will want one!

There will be 125 Various Burning Ninja Doge's, These are the Doge's that love to see \$ETHER Burn and they are always very nice to look at!

To Finish things off there is going to be 50 Legendary Monk Doge's, These are the quiet ones, easy to get along with cause they don't talk back and they are The Ones you really don't want to mess with!

The Cost to mint each one is going to be .5 BNB

There is going to be a winner of 1 BNB to each person that mints a Legendary Monk Doge! Yes a Total of 50 BNB given back to the community should you be a lucky one to mint one of the Legendary Monks and a 1 in 6 chance to win on each mint!

Once we reach 150 Mints I will begin development on the second Round of NFT Designs that will be Royalty based and Launched on ETH. All Holders of the Legendary NFTs will be able to trade up to an ETH NFT when they launch! All NFTS will have utility some may take a bit longer to bring into the light but all the NFTs will have utility in the long run of some sort, whether it is going to be the Royalties from volume on the ETH NFTs on staking for BSC side, to future utility additions!

*All Funds Generated from the sales of these NFTs will be used for project development –
(Something very big is coming)*

The Marketplace

Some of the worst things with NFT Platforms is the time and even difficulty for someone new to learn how to use! As a team here in the ETHER System who has been around a while and has made a good reputation of ourselves we all came together one day and started talking about the ideas of how to make NFT and NFT development easier for your everyday investor or even Project.

We will build an fully automatic NFT Marketplace, (This will include batch minting right on the platform, and Auto CA deployers for your Minting contracts) all the technicals are still being gone over and planned, is it a happen right away kind of thing, no. But we will still be able to offer things for the project to bring in revenue as the platform is being built!

Think of it as a NFT Marketplace with a built in NFT CA deployer and Dapp Builder. this is just a rough draft of it there is a lot more details and shit that would need to be discussed and worked out on paper, but yeah if we can pull it off then the plan is to make NFT life easier for everyone trying to start in the NFT world To Just trying to add to your own collections, to projects needing dapps and minting contracts done. Art and NFT development is our main focus, and fully automated NFT platform to use for your all your NFT needs!

Now lets say we cant get a auto dapp builder but we can pull off the NFT CA deployer, we will be offering Build as a Service with in house devs for the Dapp development. Devs on board already and still some to reach out to.

We want to also specialize in AI Art and will also offer artists if you need one to do your collection of NFTs or even just simple logos and Graphics!

We are building an ecosystem built around Ethereum Doge and holding EasyE and ETHER is a double whammy for rewards, especially when the revenue starts coming in from the project workings!

ROADMAP

Phase 1:

- *Website Development and Deployment*
- *Create Telegram and Social Communities*
- *Launch on Pancake Swap*
- *Whitepaper and website release*
- *NFT Minting Release*
- *Apply for CMC and CG*
- *Start Development on NFT and TOKEN staking platform*
- *Major Utility Development starts*

Phase 2:

- *NFTs listed and verified on multiple NTF marketplaces*
- *Team KYC*
- *Work on requirements to assist our CG and CMC applications*
- *Twitter/Tik Tok/YouTube Marketing*
- *List on AveDex*
- *List on StockTwits*
- *Audits of our Smart Contracts*
- *Tracking on Binance, Crypto.com, Coinbase ETC*

Phase 3:

- *Website v2*
- *Whitepaper v2*
- *Roadmap Continuation*

EasyETH
